

TA type no distribution (#164-177, 14 structures, 0.84 miles)

- 47' above ground height average

TA type w/ single circuit distribution (#178-184, 7 structures, 0.3 miles)

- Neutral low
 - 56'-6" above ground height average
- Distribution and neutral at same elevation
 - 56'-6" above ground height average
- Single circuit distribution and neutral at same elevation, comm below
 - 61' above ground height average

Trees – if we go up Hospital Drive and directly up the highway, there will need to be approximately 11 large cottonwood trees removed and 6 trimmed south of the river and 10 trees removed and 9 trimmed north of the river. If we go along the bike path after Hospital Drive and tie back to the highway north of the river, we would only need to remove 1 tree and trim 2 others south of the river.
