Specifically indicate portions that take place within waters of the United States, including wetlands: Include dimensions; equipment, construction, methods, erosion, sediment and turbidity controls; hydrological changes: general stream/surface water flows, estimated winter/summer flows, borrow sources, disposal locations etc.:

Dump trucks, excavators and loaders to remove gravel and fine sediments by direct method only. There will be no stockpiling of materials. The removal will primarily be completed by the Blaine County Road & Bridge Department. Linear length of removal is estimated at 500 feet by 90 feet wide at roughly 5 feet deep. Work will be done outside of live water if possible. Concrete barriers may be used.

25. IS PROJECT LOCATED IN A MAPPED FLOODWAY? NO YES If yes, contact the floodplain administrator in the local government jurisdiction in which the project is located. A Floodplain Development permit and a No-rise Certification may be required.

26a WATER QUALITY CERTIFICATION: Pursuant to the Clean Water Act, anyone who wishes to discharge dredge or fill material into the waters of the United States, either on private or public property, must obtain a Section 401 Water Quality Certification (WQC) from the appropriate water quality certifying government entity.

See Instruction Guide for further clarification and all contact information.

The following information is requested by IDEQ and/or EPA concerning the proposed impacts to water quality and anti-degradation:

- NO YES Is applicant willing to assume that the affected waterbody is high quality?
- NO YES Does applicant have water quality data relevant to determining whether the affected waterbody is high quality or not?
- NO YES Is the applicant willing to collect the data needed to determine whether the affected waterbody is high quality or not?

26b. BEST MANAGEMENT PRACTICES (BMP's): List the Best Management Practices and describe these practices that you will use to minimize impacts on water quality and anti-degradation of water quality. All feasible alternatives should be considered - treatment or otherwise. Select an alternative which will minimize degrading water quality

Access & work is planned in a dry portion of the riverbed. BMPs include potential use of concrete barriers to isolate the work area. Disturbance to riparian vegetation is minimal.

Through the 401 Certification process, water quality certification will stipulate minimum management practices needed to prevent degradation.
